

Revolutionise Your Print Setup

Let's face it, your copiers and printers aren't the most thrilling aspect of your IT Infrastructure. Just the thought of them is enough to make most of our customers' eyes glaze over and think of plans for the weekend. However, neglecting this aspect of your IT hardware can cost your business considerable time and money and even threaten your data security.

We've seen far too many clients tie themselves up in unscrupulous contracts, spend a fortune on toners and consumables and spend endless amounts of time trying to troubleshoot ageing equipment, which would be better placed in the British Museum than a modern workplace.

Which is why we can now offer you a completely FREE OF CHARGE print audit to ensure your copiers and printers are secure, running smoothly and aren't costing you more than they should. We can identify the heaviest printers in your company and give advice on how to improve your overall setup.

Step 1 - Monitor

The first step is for us to deploy an intelligent data collection agent (DCA) to your IT infrastructure. The DCA will scan your network, identify every printing device you're running and begin to actively monitor the usage data from each machine which is then securely fed back to an online portal.

Step 2 - Analyse

After around 4 weeks from the DCA deployment our print experts will begin to analyse the collected data, break down the running costs of your current equipment and build a report on your current situation.

Step 3- Improve

We will then present our findings and analysis to you. If we believe there are improvements to be made we will have real life facts and figures to back this up and detailed recommendations on how to do this.
